

Exhibit D:
Exemplary Infringement of U.S.
Patent No. 10,188,940 by Xbox
One Controller with “Smart
Trigger”

Claim 1 of US 10,188,940

An apparatus for supplying user inputs to a computer program for controlling the computer program,

To the extent the preamble is limiting, the Battle Beavers products include this feature. The XBOX One S Pro Builder is an apparatus that supplies user inputs to a computer program for controlling the computer program.

For example, the Smart Triggers provide an “input” for computer programs, such as “shooter games” including “Halo.” <https://battlebeavercustoms.com/tools/help-center#what-are-smart-triggers-bumpers>

▼ **What are Smart Triggers / Bumpers?**

Our **Smart Triggers and Smart Bumpers** are what we believe to be the epitome of performance modifications for shooter games, they remove the travel time necessary for the button to register an input. Instead of having to travel all the way down, all you'll hear is that satisfying 'click' the instant you decide to pull the trigger.

For you Halo fans, our Smart Triggers register instantly at 100% so there's no need to worry about charging for that Noob Combo!

and a mechanism for manual adjustment of a range of motion of the at least one trigger mechanism, the mechanism being disposed within an internal volume defined by the outer case of the apparatus.

The Smart Triggers include a mechanism that manually adjusts a range of motion of the at least one trigger mechanism. The Smart Trigger is disposed within an internal volume defined by the outer case of the apparatus.

The Smart Trigger modifies the as-manufactured travel path of the trigger to “remove” travel time actuate the button, i.e., shortens or adjusts the range of motion of the trigger. The Smart Trigger is positioned within the outer case of the apparatus.

the game controller having a mechanism which provides for manual adjustment of a depressible range of the at least one depressible trigger mechanism.

Smart Triggers include a mechanism that provides for a manual adjustment of the depressible range of the trigger mechanism.

The Smart Trigger “internally converts the linear trigger into a button. Removes the progressive ramp up, and as the shortest and lightest trigger pull available.” In other words, the Smart Trigger manually adjusts the depressible range (linear travel) of the trigger.
